- Can check the Weather 
- Can check the Temperature 
- Search different cities 
- Max & Min temperature 
- Can check weather and Temp for tomorrow 

Mockup

City's name

Weather

Background : will
changing
with weather

Temperature

Can search city

List of problems

- Out of plan, not really follow the plan this time, waste more time on changing topics and project.
- Max and Min temperature function are not working well, it also can only show one temperature.
- Next day weather and temperature is don't have enough time to working on it, spent most time one the first project.

List of problems

- Micro service is not working at the moment, I did create Weather service but when call the weather service can not get the API in Side the services.

Old ideas and project

Sudoku:

Number game

Puzzle game

Problems:

Random number and
Number check.

8	7	6	9					
	1				6			
	4		3		5	8		
4						2	1	
	9		5					
	5			4		3		6
	2	9						8
		4	6	9		1	7	3
					1			4

List Components and API

- React Native - Expo
- ios Components
- Weather API : "metaweather" "openweathermap"

Demo

Take aways

- Learn and doing more practice with Javascript
- Try complete whole project

See you later

- Really want to finished the project in the holiday
- Want add more features
- Maybe not launch it because it is quite simple, and it's not full complete. If really can finished it in a nice way and get more features maybe yes.

Thanks for Listening

Thank you
for
listening!
